PROFESSIONAL SUMMARY

First-Class MSc Artificial Intelligence graduate, ranked #1 in the program, with hands-on experience across frontend and backend development, AI engineering, and machine learning. Builds responsive interfaces, Python APIs, multi-agent workflows, RAG pipelines, and NLP applications using React, TypeScript, FastAPI, and Django. Experienced in application integration, testing, and deployment, with interests in Full-Stack Software Engineering, Backend Engineering, AI Engineering, and Machine Learning roles.

EDUCATION

MSc, Artificial Intelligence - University of West London, UK ***2024 - 2025***

- Graduated with First-Class Distinction - Ranked #1 in MSc AI Program

BSc, Computer Science - Capital University of Science and Technology, Islamabad, Pakistan ***2019 - 2022***

INTERNSHIP EXPERIENCE

Machine Learning & AI Fluency Intern - FlyRank AI ***Jul 2026 - Oct 2026***

- Completed the Machine Learning and AI Fluency tracks - verify at internship.flyrank.ai/verify (FR-D11-2861B-D736E, FR-D11-46948-FE5B2).
- Completed 20 Anthropic courses: Claude API, Claude Code, agent skills, subagents, MCP, Amazon Bedrock, Google Vertex AI, and AI Fluency.

Website Development Intern - Tegic Technology LLC ***Oct 2025 - Dec 2025***

- Gained practical exposure to website development, including web page structure and interface design.
- Worked within the company's web development workflows across the internship period.

RESEARCH & ACADEMIC PROJECTS

AI Research Project - Master's Dissertation - University of West London ***Jun 2025 - Sep 2025***

- Architected a cloud-based, real-time Twitter sentiment analysis pipeline using Apache Kafka and Spark Structured Streaming.
- Trained and deployed multilingual NLP sentiment classification models integrated into a live streaming workflow.
- Built a live analytics dashboard for real-time monitoring using Django and MongoDB.

Pulmonary Fibrosis Progression Detection System - BSc Final Year Project, CUST Islamabad ***2021 - 2022***

- Built an ML-based Django system predicting disease progression from medical imaging datasets using Scikit-learn.

TECHNICAL PROJECTS

Clerkly - AI-Powered Paperwork Agent - AWS "Agents for Humans" Hackathon (Team Project)

- Owned backend architecture and development (frontend/UI built by a teammate); led integration of both halves into a working full-stack application.
- Built a multi-agent system with the Strands Agents SDK that reads, analyzes, and acts on everyday paperwork including documents, emails, payments, and signatures.
- Designed a three-layer AI fallback (Amazon Bedrock Nova Lite, then OpenAI GPT-4o, then deterministic rule-based extraction), plus a hardcoded safety layer blocking payment or signature actions without explicit human approval.
- Built multi-tenant organization architecture with owner/admin/member roles, invites, scoped access control, FastAPI, SQLAlchemy, and JWT authentication.
- Integrated Stripe, DocuSign, and Gmail API with full audit logging of task events.
- Stack: Python, FastAPI, SQLAlchemy, Amazon Bedrock, OpenAI, Next.js, Tailwind CSS.
- GitHub: github.com/yasmeenmh90-beep/Clerkly

Multi-Agent RAG - Grounded Research Assistant - Hackathon Project (Solo)

- Built a 7-agent RAG pipeline with LangGraph that routes queries across domain-specific retrievers and verifies answers against retrieved evidence with a critic agent and rewrite-and-retry loop.
- Implemented hybrid retrieval (dense + BM25 via Reciprocal Rank Fusion), optional cross-encoder reranking, and an autonomous Literature Review Generator using arXiv/Semantic Scholar.
- Designed a two-service architecture using FastAPI for agents/model calls and Django for dashboard/persistence, with streaming chat and conversation history.
- Stack: LangGraph, LangChain, Chroma, FastAPI, Django, Docker, RAGAS.
- GitHub: github.com/yasmeenmh90-beep/multi-agent-rag-research-assistant

CivicRelay - Agentic Civic-Issue Platform - LexHack 2026 (Team Project)

- Built a five-agent civic-resolution workflow covering Triage, Research, Action, Tracking, and Approval, with human approval required before escalation.
- Supported multi-channel issue intake through web forms, WhatsApp Cloud API, voice transcription, and simulated IoT telemetry.
- Implemented automated SLA tracking and escalation workflows with scheduled monitoring and approval-gated state changes.
- Developed and tested the FastAPI backend with 116 automated tests passing across core workflows and edge cases.
- Stack: Python, FastAPI, Agentic Workflows, WhatsApp Cloud API, Amazon Transcribe, APScheduler, IoT Telemetry.
- GitHub: github.com/yasmeenmh90-beep/Civic-Relay

CERTIFICATIONS

IBM RAG and Agentic AI - Professional Certificate

Coursera / IBM Skills Network - 10-course specialization covering RAG, agentic AI, LangChain, LangGraph, CrewAI, AutoGen, BeeAI, MCP, and multimodal generative AI applications.

Certificate: coursera.org/verify/professional-cert/9GFFID3MYTMF

SKILLS

- **Frontend:** React, TypeScript, JavaScript, Next.js, Tailwind CSS, Responsive Interfaces
- **Backend:** Python, FastAPI, Django, REST APIs, SQLAlchemy, PostgreSQL, Authentication
- **AI / Machine Learning:** LangGraph, LangChain, Strands Agents SDK, RAG, NLP, Scikit-learn, Model Evaluation
- **Data & Systems:** SQL, Pandas, NumPy, Apache Spark, Apache Kafka, MongoDB, Chroma
- **Engineering Tools:** Git, GitHub, Docker, Linux/Ubuntu, Automated Testing, Deployment
- **Languages:** English (Fluent), Urdu (Native)
